---

---

---

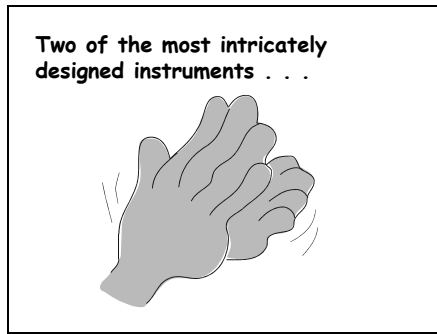

---

Slide 7

➤ Hand injuries account for 1/3 of the 2 million disabling accidents that occur each year.

➤ 80% were caused by pinch points.

Pinch points catch us when we aren't paying attention.

---

---

---

---

---

---

---

Slide 8

Take proper precautions when working around pinch points.

Pulleys and belts form in-running nips - a type that can draw in a hand and cause severe damage.

In-running nips should be covered with guards.

---

---

---

---

---

---

---

Slide 9

⚠ Never wear gloves around in-running nips.

⚠ The glove could be caught and the hand could be pulled in.

---

---

---

---

---

---

---

Slide 10

➤Wear approved work gloves when handling rough materials.

➤Take time to remove or bend down sharp edges on materials.

---

---

---

---

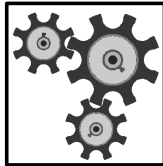

---

---

---

Slide 11

Machine guards should always be used.

If you have to perform maintenance or reach into a machine, always lock it/tag it out.

---

---

---

---

---

---

---

Slide 12

When moving objects, make sure doorways and aisles are wide enough to move through safely with adequate hand clearance.

Be cautious when setting a load down, too.

---

---

---

---

---

---

---

Slide 16

☞ **Remember:**

Your hands are fearless. They go wherever they are sent and act only as wisely as the person they belong to.

---

---

---

---

---

---

---

Slide 17

**Hand Safety Reminders**

- ☞ Pay attention to your work.
- ☞ Keep an eye out for pinch points and in-running nips.
- ☞ Keep guards in place on pinch points.
- ☞ Have minor cuts and scratches treated to prevent infections.
- ☞ Wear gloves to avoid splinters and cuts; DON'T wear gloves around in-running nips.
- ☞ Keep hands free of oil or grease.
- ☞ Don't wear rings if you work around machinery.
