Slide 3

Slide 4

Good housekeeping is also important at work.

Orderly arrangement of work areas is vital to the safety of workers.

Slide 5

It's a fact!

- Before 1990, more than 10,000 people were killed on the job annually in the US.
- Approximately another 30,000 die each year in home accidents.

Slide 6

- Each year, over 3,000 job-related deaths are caused by falls - many are the result of poor housekeeping!
- Falls can result from tripping over tools left in the aisles or work areas.
- Wet floors or trash in stairways can also cause slips and falls.

Slide 7

Slide 8

Slide 9

Slide 10

Isn't it easier to do your job when your work area is neat?

Keep your tools off the floor and stored in the proper places.

This can reduce tripping hazards and protects your tools and equipment.

Slide 11

Who put this trash in here?! We need to get rid of all this stuff!

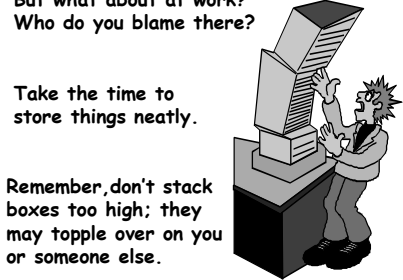

Slide 12

But what about at work? Who do you blame there?

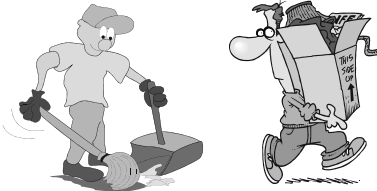

Take the time to store things neatly.

Remember, don't stack boxes too high; they may topple over on you or someone else.

Slide 13

Clean up what you mess up.

Your Momma isn't going to come behind you and clean it up for you.

Slide 14

- ✓ Pitch in and clean up when it's not your mess before someone gets hurt
- ✓ Mop up the water
- ✓ Clean up the oil spill
- ✓ Pick up the trash
- ✓ Don't let bad housekeeping get you or your friends hurt

Slide 15

- ✓ Clean up your own mess!
- ✓ Clean up spills quickly!
- ✓ Put trash in the trash cans!
- ✓ Store tools and equipment neatly!
- ✓ Use protective equipment or sweep when cleaning up sharp trash, such as glass or nails.
